What you asked

Threadline turns a multi-site customer's data into a clear, honest review for the annual meeting.

You asked	Where it is in Threadline
Customer-level managerial view with site drill-down	Overview · Sites
Customer-ready review export	Export: PowerPoint, PDF, Excel
Show customers they can save more by working with Lindström more	Opportunities
Know where customer companies are going and how Lindström can help	Company insights
Easy to understand and explain for account managers	Review meeting · Simple and Expert views · glossary
A credible path to approved sources, more industries, countries and service lines	Data readiness · extension pack (Baltic Harbour Hotels, Mats, Estonia)

Built on Lindström's work

Each part maps to something Lindström already has. Public facts are context only, never inputs.

Lindström asset	How Threadline uses or extends it	Source
Managerial dashboard mockups	The same module and pack model (config/modules.json) and the same KPI-row layout.	Data pack
eLindström customer portal	Proposed as an eLindström module, adding per-kg, monthly, per-site allocation with baselines and ranges.	Public
RFID garment tracking	Utilisation = scanned ÷ allocated; service cycles and the on-time rate.	Public
Tableau reports	One adapter per report type; these are the Tier 1 source path in Data readiness.	Data pack
WWS laundry environmental-impact calculator	Laundry intensities and waste routes, allocated to the customer by washed-kg share (A003).	Data pack
Sustainability Report 2025	Context only; status labels keep prototype estimates separate from reported figures.	Public
Workwear Alarm / repairs service	Observations R1 and R5 point to these levers as next steps.	Data pack
Data pack assumptions A001–A008, Baselines, Industry_Priorities	Used verbatim; team assumptions (T1 onwards) are added and labelled in the register.	Data pack

Easy to explain: a guided customer meeting

Five steps, one message each. NorthStar Foods Group (synthetic), 2025, demo scenario on.

1 · What you got

1,407 m³ of water saved

255 t CO_2e avoided

1,152 h of staff time freed

range 206 t CO_2e – 304 t CO_2e

2 · Vs doing it yourself

About €788k less with Lindström

€1.96M do it yourself vs €1.17M example contract

net range €193k – €1.57M

3 · Where to improve

NorthStar Kraków: 67 kg per wearer

Typical across sites: 49 kg

One site, one action

4 · Grow together

4 more sites + Mats

€410k do-it-yourself cost avoided a year

60 t CO_2e saved

range €257k – €692k

5 · Agree next steps

Discussion points

Actions with an owner and a target

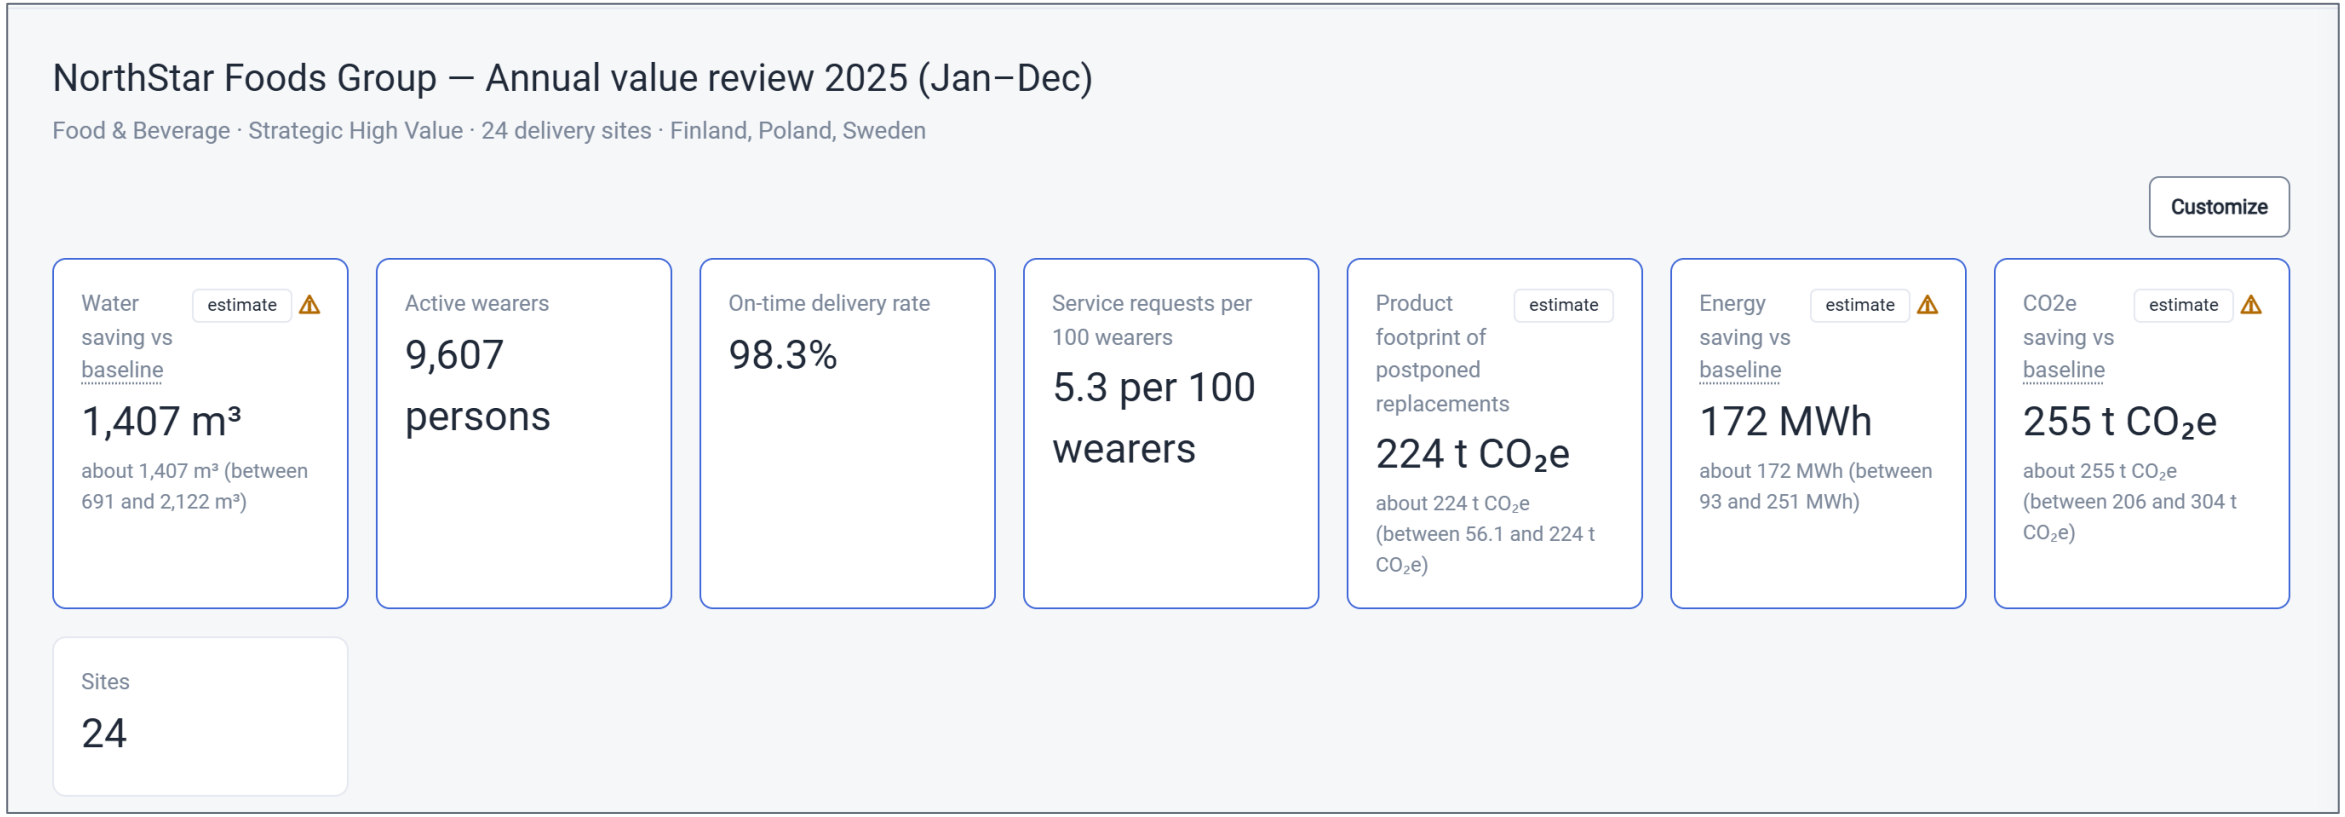

Export: PowerPoint, PDF, Excel

Same order in the exports

- Each step: one message, two or three big numbers, and the sentence to say (What to say, with Copy).
- Steps 2 and 4 never open empty: a KAM-only Load demo scenario button fills example numbers.
- Customer view: no edit controls, no Company insights, no internal metrics.
- Expert shows how each figure is calculated; the exports follow the same five steps.

The dashboard at a glance

A real screen from the prototype: the Overview page for the synthetic NorthStar Foods Group.

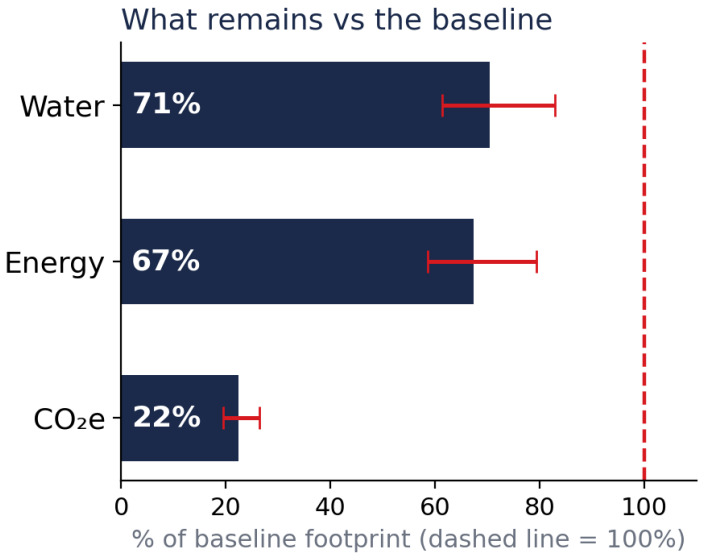

Each figure has a status and, for estimates, a low to high range. Sites, observations and the priority view sit below.

The customer's numbers, with ranges

NorthStar Foods Group, 2025, against outsourced local laundry.

Measure	Value	Low to high	Status
Water saving	1,407 m³	691 – 2,122 m³	Estimated
CO_2e saving	255.1 t CO_2e	205.7 – 304.4 t CO_2e	Estimated
Energy saving	172 MWh	93 – 251 MWh	Estimated
Active wearers	9,607 persons	n/a	Calculated
Repairs completed	15,233	n/a	Calculated
On-time delivery rate	98.3%	n/a	Calculated
Recycling rate	73.1%	n/a	Allocated

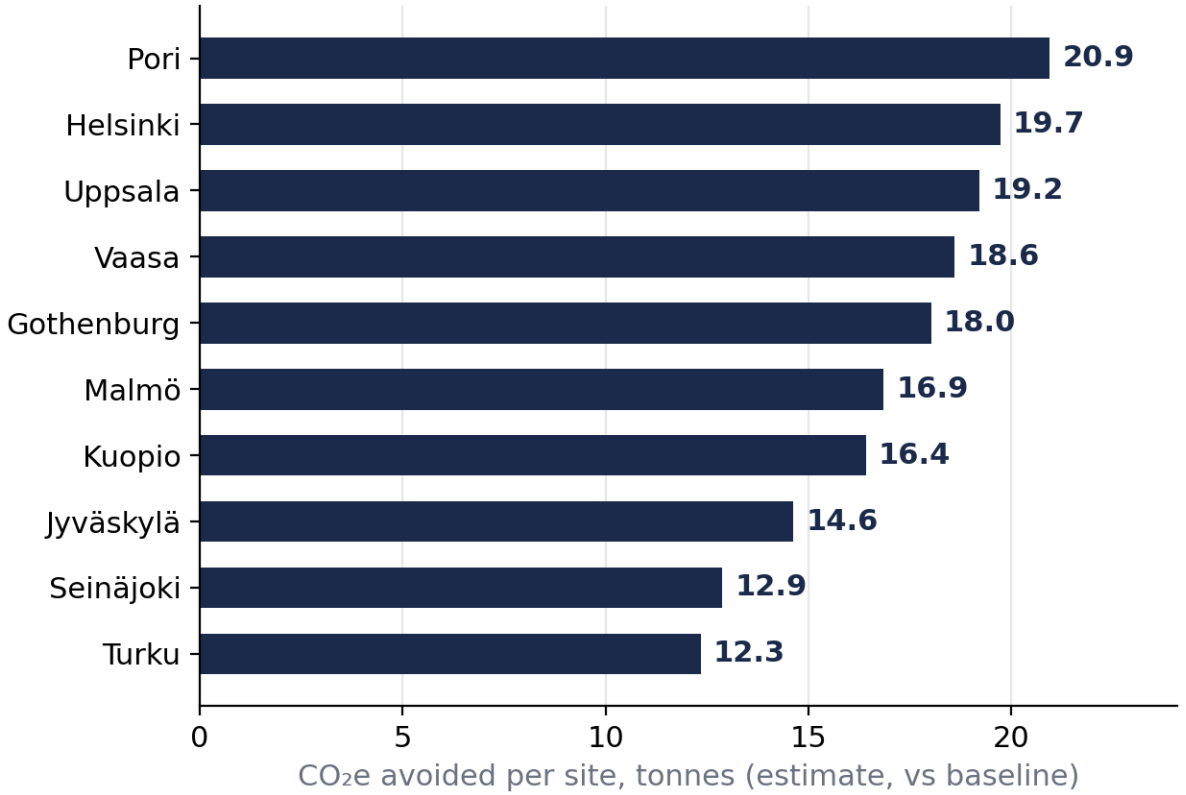

- Lower is better: 71% means 29% less than the baseline.
- Whiskers show the low to high range. Estimates, not audited.

Status tells the reader how each figure was made: measured, calculated, allocated or estimated.

Savings by site, and where to look

Customer level first, then the sites: the biggest savings and the ones that stand out.

Top 10 of 24 sites: CO_2e avoided

Highest and lowest washing per wearer

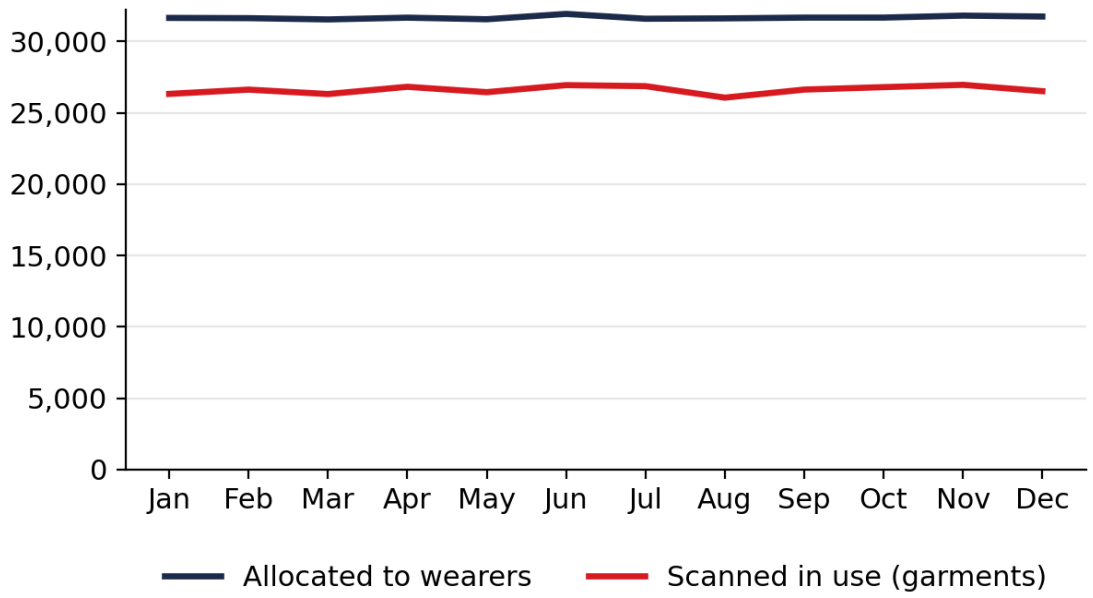

Site	kg / wearer	Utilisation	On time
Kraków	67.0	85.6%	98.2%
Malmö	62.9	84.9%	98.1%
Pori	60.5	84.2%	97.2%
Lahti	38.1	84.4%	97.8%
Tampere	38.1	83.4%	98.3%
Warsaw	37.3	82.7%	97.9%

- Three highest and three lowest of 24 sites, per year.
- Site figures are indicative estimates. A site far from its peers gets an observation, not a verdict.

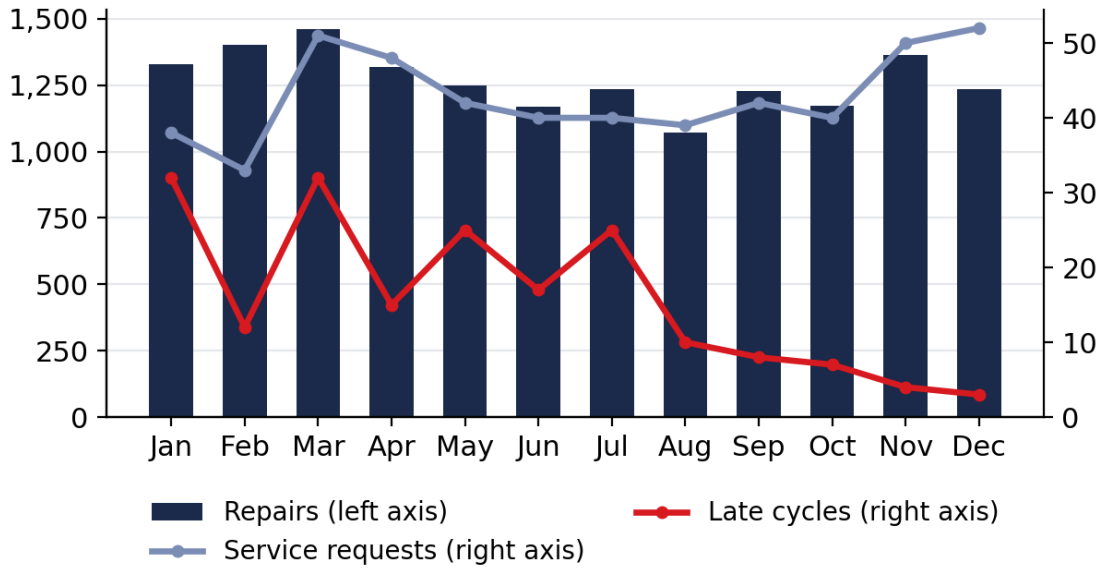

Month by month

Account totals for each month of 2025, all sites together.

Garments in the service

Repairs, service requests, late cycles

- About 84% of allocated pieces were scanned in use across the year.
- Left: pieces allocated against pieces scanned. Right: repairs on the left axis, service requests and late cycles on the right.
- Click a site in the dashboard to see the same two charts for that site.

Save more by working with us more

NorthStar Foods Group, per year, vs outsourced local laundry. Typed by the KAM, defaults otherwise.

Service vs doing it yourself

Doing it yourself would cost
1,957,510 EUR
range 1,363,310 – 2,739,773 EUR

Example contract price typed by the KAM
1,170,000 EUR
entered on the page

Net: doing it yourself minus the contract
787,510 EUR
range 193,310 – 1,569,773 EUR

- Extra replacements without repairs: shown, not in the total.
- Net appears only once a contract price is entered.

Grow with us: 4 more sites + Mats

Extra do-it-yourself cost avoided
410,252 EUR
range 257,458 – 691,829 EUR

Extra CO_2e saved
59.6 t CO2e
range 41.2 – 91.5 t CO2e

Extra water saved
329 m³
range 138 – 638 m³

- €, hours and CO_2e are never added into one score.

Knows where your customers are going

Internal view for the account manager · Fazer Group, a real public company · snapshot from 2026-11-07

Where they're going

In July 2025 Fazer decided to invest approximately EUR 400 million in a new chocolate factory of about 33,300 m² in Lahti, Finland, due to start operating in 2028; chocolate production will partially continue in Vantaa.
Source: news.cision.com, 2025-07-14

At the end of 2025 Fazer had 4,693 employees (FTEs); 68% worked in Finland, 21% in Sweden and 10% in the Baltics.
Source: mb.cision.com, 2026-02-23

Fazer's Scope 3 emissions were 6% above the 2020 baseline in 2025; the company names limited supply-chain data as an obstacle and piloted product-level emission calculations for 100 SKUs.
Source: mb.cision.com, 2026-02-23

How Lindström can help

- Workwear
- Mats
- Washroom

Ask in the next meeting

Your Lahti chocolate factory is due to start in 2028 — how are you planning workwear, hygiene and changing-room services for the new site?

AI-generated from public sources — verify before use. Example public company; no relationship with Lindström is implied.

Credible by design

Every figure has a status, every estimate a range

- CO_2e avoided: 255.1 t CO2e (range 205.7 – 304.4 t CO2e), estimated.
- Measured · calculated · allocated · estimated; baselines and assumptions are visible.

We flag what doesn't add up

- One laundry (Nordic Malmö WWS, L003) reports about 11 times more customer volume than it processed in 2025.
- We flag it, lower the confidence and ask Lindström which figure is right.

Honest comparisons

- The baseline is a visible choice (local laundry, home, in-house).
- Extra replacements shown, not in the do-it-yourself total; net only with a contract price.

AI never writes numbers

- The narrative uses placeholders the engine fills; a guard rejects invented digits.
- Company insights keeps only searched, dated sources with safe links.

Grows with your business

A new service line, industry, customer and country: data and config only.

The whole change

`config/sources.yaml`
+1 line: the extension pack

`data/extension_pack/`
6 CSV files (synthetic)

`config/industry_rules.yaml`
Hospitality priorities and note

Proof test

tests/test_extensibility.py adds Washroom, Restaurants and Latvia from a temporary CSV pack: no code edits.

What appears in the app

- Customers: 3 → 4: Baltic Harbour Hotels (Hospitality)
- 5 sites in Estonia, Finland
- Service lines: Mats, Workwear
- Priorities from the Hospitality rule: Service quality, Cost & utilisation, Water
- NorthStar Foods Group unchanged: CO_2e avoided 255.1 t CO2e
- Check C1 still flags only L003

Exports & path to production

One review, three formats

PowerPoint
11 slides

PDF
12 pages

Excel
12 sheets

- Counts are for the NorthStar customer review export, not this deck.
- Same numbers as the dashboard; the disclaimer on every page.
- Customer audience hides internal metrics.

Path to production

- Tier 0: synthetic pack (built)
- Tier 1: Tableau / eLindström exports for one pilot customer
- Tier 2: governed data platform
- Tier 3: a module inside eLindström

What we need from Lindström

- Q35: which L003 volume figure is right
- Approved emission factors and baselines
- Contract prices, and CRM legal names for Company insights
